

## What customers are saying about (E)JES

---

"(E)JES is simply GREAT! It beats the pants off of SDSF!!!"

"We've been testing (E)JES for JES2 and it looks OUTSTANDING!"

"Great tool!"

"We haven't found anything that [the other products] did that (E)JES can't do better."

"Good folks! Great product! Great support!"

## Why (E)JES is better

---

Below are just a few of the things users have told us they like about (E)JES:

- Multisystem displays without MQ and associated costs and setup.
- Line commands to send job output via ftp, e-mail, or TSO TRANSMIT and RECEIVE.
- Post-processing of job output using supplied or user-written scripts.
- More powerful tabular sorting options including tri-modal point/shoot sorting.
- Intelligent column formatting for date and time values, memory amounts, numeric values, etc.
- More robust tabular filtering options including colorization of filtered objects.
- More powerful column arrangement options. Arrange all columns and choose your own scroll point.
- More intelligent horizontal scrolling options. Ensure tabular columns are not "chopped."
- Enhanced multiple data set browsing capabilities with an option to view data sets one at a time.
- More intelligent vertical scrolling options. BOTTOM scroll mode makes viewing "live" data easier.
- Browser FIND with ISPF-like positioning, FIND match highlighting, and RFINDP function.

## What about training?

---

(E)JES is intuitive and uses commands familiar to ISPF users. Most users are up and running right away with little or no training. (E)JES comes with a transition guide that lists every command used in SDSF and its (E)JES equivalent (many of them are exactly the same). Free training videos are also available that quickly show users how to do the most common tasks as well as a few simple tricks that make managing your spool easier than ever. Visit our (E)JES online training center to learn more: [http://phoenixsoftware.com/EJES/ejes\\_training.htm](http://phoenixsoftware.com/EJES/ejes_training.htm)
