What is HSA?

HSA (HSM Admin) is a comprehensive utility that provides extensive function for analysing, managing, auditing and administrating the DFSMShsm (DFHSM) environment in real-time.

HSA Functions

➢ Provides an easy-to-use ISPF interface with robust features and functionality.
➢ Allows you to customize product features and functions online.
➢ Generates user commands from report data for further processing.
➢ Assists in monitoring the overall health of your DFSMShsm environment.
➢ Prevents loss of services and downtime due to storage shortages, recall/migration failures, and out-of-date backup copies of essential data.

Real-Time DFSMShsm Reporting

➢ Provides a comprehensive list of reports with real-time access to your DFSMShsm data for performing what-if analysis.
➢ Allows you to customize reports so data is displayed in your preferred format.
➢ Supports generating reports in batch so the contents can be written to a data set for further analysis.

Precise Auditing

➢ Detects and corrects critical errors in the DFSMShsm environment.
➢ Contains HSM audits and built-in fixes for correcting errors.
➢ Provides the necessary tools to create custom fixes for site-specific issues.
