

SENTINEL: z/OS and Enterprise Wide FTP Management
An All Encompassing & Secure Real-Time FTP Management Solution
Version 2.5 – New Features

Real-Time Monitor Aggregation

SENTINEL now incorporates enhanced Real-Time Monitor Aggregation functions for simplified and optimized usage:

- Consolidates all History File write I/O to a single address space, thereby eliminating file sharing issues
- Batches the History File write activity, resulting in fewer CI/CA splits in the History File
- Many in-built and automatic recurrence options (E.g. Daily, Weekly, Business Day of Month, Etc.)

Support for Dovetailed Technologies Co:Z SFTP Server

SENTINEL works in harmony with [Co:Z SFTP](#), which is a port of OpenSSH sftp for z/OS, adding support for MVS datasets, catalogs, partitioned datasets, et al. Thus Co:Z SFTP is a secure z/OS based FTP server alternative to IBM's Ported Tools SFTP server.

Co:Z SFTP supports direct read/write access to MVS datasets, whereas IBM's ported solution only supports HFS files. Co:Z SFTP writes SMF records to log activity and interfaces with user exits which are plug-compatible with the user exits in the IBM z/OS FTP server. Therefore SENTINEL now provided the following complementary Co:Z SFTP functions:

- Monitor Co:Z SFTP server usage in real-time, as per z/OS FTP server
- Police usage of the Co:Z SFTP server with same SAF rules, as per z/OS FTP server

Complementary FTP Analysis

We provide, free of charge, an online, interactive analysis of sample SMF and/or distributed systems FTP usage data from your Data Center. With this analysis, you will see for yourself whether your FTP usage is compliant and properly managed. For z/OS users, we also provide a Wizard to simplify the collection and transmission of SMF data. Please [Contact Us](#) for further information regarding this SENTINEL FTP usage analysis.
